

Figure 1 displays a large grid of 100 small plots, each representing the distribution of a specific species across 100 different locations. The species names are listed on the left side of the grid, and the location names are listed at the top. Each plot shows the relative abundance of the species at that location, with colors indicating the level of abundance. A color scale at the top of the grid indicates the relative abundance from 0 to 100.
